it gives me much pleasure to introduce this work of prof dr ing fumagalli a work that covers both the development and present state of the art of structural model techniques in my view in this context only a lack of understanding of the possibilities offered by experiments on models and sometimes an unjustified suspicion of them have up to now restricted the development that these methods deserve i think in particular and the many examples quoted in the text bear witness to this that models today constitute an efficient means of research that have been refined through advances in the methods of reproduction testing and measurement they represent a reliable and above all safe method of investigation suitable for use in the elastic range and beyond up to failure as much for historic ancient monuments as for modern works and structures of particularly bold design that are frequently highly redundant they are a particularly valuable tool in areas where analytical methods are inadequate and yet always useful for comparison with analytical results guido oberti preface i have embarked on writing a text on the techniques of structural models for two basic reasons firstly because i wish to attempt in some measure a personal appreciation of the subject based on more than twenty years experience insofar as this can be achieved in a logically coherent and complete treatise

methods and processes of plastering for students of plastering and those taking a general building course

excerpt from the practical plasterer a compendium of plain and ornamental plaster work with useful recipes and a glossary of terms the work does not of course profess to be a complete

or exhaustive treatise but it is at least an honest attempt to deal on practical lines within the limits stated with an ancient and important craft it embodies a considerable preface about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

in the space of only a few years reconstructive surgery of the skeleton of the hand has become a focus of attention the reason for this has been the advent of principles and techniques of stable internal fixation the unparalleled advantages of which are particularly evident in the treatment of the complex multi structural lesions so typical of injuries of the hand and also in procedures such as replantation or revascularisation what a striking contrast on the other hand is to be seen in the slow and painful progress made in our understanding of the biomechanics of the radiocarpal joint this is most eloquently illustrated by the embryonic state of prosthetic surgery of the wrist compared with the sophisticated advances made in hip and knee surgery yet it is undeniable that painful conditions involving dysfunctions of the wrist are increasing in number and affect young people in particular this should spur us on to seek more effective therapeutic solutions

this book gathers peer reviewed contributions presented at the 3rd RILEM spring convention and conference held at Guimarães and hosted by the University of Minho Portugal on March 9-14 2020 the theme of the conference was 'Ambitioning a Sustainable Future for Built Environment' comprehensive strategies for unprecedented challenges which was aimed at discussing current challenges and impacts of the built environment on sustainability the present volume is dedicated to the topic 'Strategies for a Resilient Built Environment' which covers the current and emerging approaches that lead to an optimized design and maintenance of constructions and systems it includes the development of service life models and life cycle design in order

to maximise longevity and level of service while minimising the environmental impact of constructions and systems it also includes the analysis and design of larger systems such as communities cities or regions aiming at reducing risk and increasing resilience the following subtopics are included resilience and robustness of the built environment and communities at local and global scales risk based inspection and maintenance life cycle analysis and service models performance based design improved design strategies by integrating materials and structures

this book provides a framework to help managers go beyond simply fighting fires every day offering the tools to address the underlying causes of recurring problems and deliver long term solutions the most obvious part of any problem is the pain it causes the desire to end the pain and find a solution any solution that will make it go away now is usually so great that it blinds managers to the underlying systemic cause of the problem the result is that we solve the problem today and then it comes back again tomorrow or next week again and again we are only addressing the symptoms but never understanding the cause like picking the flower heads off weeds but not digging them out at the roots schaveling and bryan offer the insights and tools managers and leaders need to achieve a longer term and more effective approach by stepping back and analysing the system as a whole and at the heart of any system are human beings notoriously short term and pain averse creatures who will behave in whatever way minimises pain today even at the expense of pain tomorrow they show how to detect the behavior patterns that have become engrained in the organisation and which underlie complex situations so that root causes of problems can be identified once the system responsible for the problem is understood smarter decisions can be made to devise interventions that solve the core problem instead of wasting energy fighting the symptoms
