from one of the world's most beloved and outspoken public intellectuals comes an illuminating book on the nature of criticism readers will be surprised stimulated instructed impressed the new yorker what is a beginning what must one do in order to begin what is special about beginning as an activity or a moment

or a place so begins beginnings a scintillating work of criticism by Edward W. Said, author of *Orientalism*, the question of Palestine and other seminal works, and one of the most lauded public intellectuals of our time. Tracing humankind's diverse understandings of what it means to begin throughout history, Said argues that beginning is itself a method, the first step in the creation of meaning. It's what sparks a break from preexisting tradition and it's what authorizes new texts to be. As ever, Said insists on a criticism that is both humane and socially responsible. *Beginnings* is about much more than writing; it is about imagination and action, as well as the constraints on freedom and invention that come from achieving human intention. The result is a classic and necessary treatise on the role of the intellectual and the worth of criticism.

As a rapidly rising force in the global market, Asian countries hold opportunities for growth and development. However, in order to successfully gain entry into this new part of the market, it will first be necessary to understand the motives and background behind Asian economies. *Asian Business and Management Practices: Trends and Global Considerations* analyzes the various strategies found in the Asian economic market, showcasing a broad range of countries in Southeast Asia, in addition to China and India. This publication is a broad, widely encompassing resource for academics, PhD students, experts, policymakers, and government officials interested in understanding the background and applications behind business success in Asia.

*Advanced Driver Intention Inference Theory and Design* describes one of the most important functions for future ADAS: namely, the driver intention inference. The book contains the state-of-the-art knowledge on the construction of driver intention inference systems, providing a better understanding on how the human driver intention mechanism will contribute to a more naturalistic on-board decision system for automated vehicles. Features examples of using machine learning, deep learning to build industry products, depicts future trends for driver behavior detection and driver intention inference, discuss traffic context perception techniques that predict driver intentions such as lidar and GPS.

While previously available methodologies for software like those published in the early days of object technology claimed to be appropriate for every conceivable project, *Situational Method Engineering* acknowledges that most projects typically have individual characteristics and situations. Thus, finding the most effective methodology for a particular project needs specific tailoring to that situation. Such a tailored software development methodology needs to take into account all the bits and pieces needed for an organization to develop software, including the software process, the input and output work products, the people involved, the languages used to describe requirements, design, code, and eventually also measures of success or failure. The authors have structured the book into three parts. Part I deals with all the basic concepts, terminology, and overall ideas underpinning situational method engineering, as a
